ABSTRACT

The 1998 annual report on schools in the Illinois community college system focuses on student enrollment and completion. Reported highlights in student enrollments for the 49-college system include: (1) nearly one million students were recorded in credit and non-credit courses, a 1.9% increase over 1997; (2) full-time equivalent enrollment in credit courses was 217,310; (3) females comprised 56.1% of the student population in credit-generating programs; (4) non-white students accounted for one-third of the credit students enrolled; (5) median age of credit-generating students was 27.4; and (6) three out of four credit students attended on a part-time basis during both the fall and spring semesters. Highlighted findings in student completion include: (1) more than 34,500 collegiate-level degrees and certificates were awarded, a 3.4% increase over 1997; (2) nearly 60% of all 1998 degrees and certificates were earned through completion of occupational programs; (3) 45.4% of the occupational degrees and certificates awarded were associate in applied science degrees; (4) females accounted for 61.4% of all completions, and a similar proportion was reflected in the baccalaureate transfer and occupational program areas; (5) the proportion of occupational graduates increased as age advanced; and (6) a larger number of minority graduates was found in the occupational area (5,868) than in baccalaureate/transfer area (2,221). Appendices include credit and noncredit enrollment data tables and completion data tables. (AS)

INTRODUCTION

The colleges in the Illinois community college system submit detailed student records twice during each fiscal year. Fall opening enrollment (E1) data for credit-generating students are recorded by the colleges at the end of the regular fall registration period, which is usually the 10th day of the term. Annual student enrollment and completion (A1) data are reported for all students who are officially enrolled at the college in credit coursework at any time during the fiscal year. An A1 record is also submitted for students who graduate, but are not officially enrolled during the year. Noncredit community education classes are not collected in these databases. The Illinois Community College System is presently developing a noncredit enrollment database to house demographic information on the wide range of noncredit instruction provided annually. Since fiscal year 1994, aggregate noncredit enrollment data have been gathered through the use of a yearly survey.

Fall enrollment data provide a point-in-time or "snapshot" of fall term enrollment allowing year-to-year and institution-to-institution comparisons and are comparable to fall enrollment data in postsecondary institutions nationwide. However, the diversities of the community college system and its students are best captured in annual student enrollment and completion records. This is because the age, attendance patterns, and goals of the community college student are unconventional. Students "stop in and out" of college according to their individual needs and may not always be enrolled at the beginning of a fall semester. The increase in module classes adds to the complexity of tabulating student enrollments at any given time. Additionally, with elevated emphasis on student outcomes and program effectiveness, analyses of student completions have become increasingly important. Therefore, the analyses in this report have focused on annual enrollment and completion data in an effort to secure the most comprehensive and accurate information available.

This report, the sixth in a series of annual publications, varies in content from previous reports. For the first time, aggregate annual noncredit course enrollment data are provided along with annual enrollments for credit-generating students. Additionally, unlike past reports, completions are reported only for collegiate-level programs. Advancements in adult education and English as a Second Language programs are excluded but, along with supplementary credit enrollment and completion data for each community college, will be available in the 1999 edition of *Data and Characteristics of the Illinois Public Community College System*.

This year's report is based on fiscal year 1998 enrollments and completions. For comparison with past enrollments and completions, summary data for the four previous fiscal years (1994-1997) are also presented. Detailed tables comparing fiscal year 1997 and fiscal year 1998 credit headcount, full-time equivalent (FTE) enrollments, and graduates by college are included. Detailed tables for noncredit course enrollments will become available for future reports as the noncredit database evolves. FTE enrollments in this report are based on all credit hours attempted (including nonreimbursable credit hours).

HIGHLIGHTS OF FISCAL YEAR 1998 ANNUAL REPORT

Student Enrollments

- The Illinois community college system recorded a total of nearly one million (957,815) students in credit and noncredit courses in fiscal year 1998, an increase of 1.9 percent since fiscal year 1997.
- Credit-generating students accounted for slightly more than two-thirds (68.8 percent) of the overall fiscal year 1998 headcount.
- During fiscal year 1998, the 49 public community colleges in Illinois enrolled 659,069 students in instructional credit courses, 2.7 percent less than the previous year. The full-time equivalent (FTE) enrollment was 217,310, a decrease of 0.6 percent since fiscal year 1997.
- More than 33,500 noncredit course sections were conducted throughout the state during fiscal year 1998.
- From fiscal year 1997 to fiscal year 1998, the number of individuals receiving instruction through noncredit course offerings increased 13.9 percent (to 298,746 students).
- Females comprised 56.1 percent of the fiscal year 1998 student population enrolled in credit-generating programs.
- Minority (non-white) students accounted for one-third of the credit students enrolled, 0.8 percent less than in 1997. Black representation was at its lowest (14.4 percent) in the past five years. Both black and Hispanic student populations decreased in proportion by 0.5 percent.
- The median age of credit-generating students was 27.4 during fiscal year 1998, slightly younger than the previous year. The average age remained unchanged at 31.5 years.
- The largest credit instructional program offered in the Illinois community college system, baccalaureate/transfer, enrolled 35.4 percent of the fiscal year 1998 students.
- Statewide, occupational credit program enrollments declined 1 percent since last year. This was the sixth consecutive year in which a decline in occupational enrollments was exhibited.
- As in previous years, associate degree nursing (ADN) was the largest occupational program, enrolling 10,609 students in fiscal year 1998. ADN enrollments were down 5.0 percent from fiscal year 1997.
- Although 35.4 percent of the fiscal year 1998 credit student population was enrolled in the baccalaureate/transfer area, only 26.9 percent of all students indicated an intent to transfer.
- More than one-half (52 percent) of the fiscal year 1998 credit students enrolled in Illinois community colleges indicated that they were not pursuing a degree, but attending only to complete one or several courses.
- Three out of four credit students attended on a part-time basis during both the fall and spring semesters in fiscal year 1998.
- Fifteen percent of the credit-generating students are known to already have earned some type of collegiate certificate or degree. This includes 31,237 who earned a bachelors degree or higher.
- Illinois community college students were enrolled for nearly 6,519,290 credit hours throughout fiscal year 1998 and earned nearly three-fourths of those hours.
- Accumulated credit hours were available for 71 percent of the fiscal year 1998 student population. Of that percentage, 31 percent had accumulated 30 or more college-level hours (sophomore level).
- Cumulative grade point average data was reported for 64.5 percent of the fiscal year 1998 students. Forty-five percent held an A-B average.

HIGHLIGHTS OF FISCAL YEAR 1998 ANNUAL REPORT
(Continued)

Student Completions

- More than 34,500 collegiate level degrees and certificates were awarded to students at Illinois community colleges in fiscal year 1998, 3.4 percent more than in fiscal year 1997.
- Over 13,300 baccalaureate/transfer degrees were earned during the fiscal year, an increase of 2 percent since 1997, accounting for more than 38.7 percent of all completions.
- Nearly 60 percent of all fiscal year 1998 collegiate degrees and certificates were earned through completion of occupational programs.
- Students successfully completed nearly 20,400 occupational degrees and certificates in Illinois community colleges during fiscal year 1998, a 4.2 percent increase from the previous year. The increase was primarily due to a larger number of certificates awarded.
- Nearly half (45.4 percent) of the occupational degrees and certificates awarded in fiscal year 1998 were associate in applied science degrees.
- Females accounted for 61.4 percent of all completions during fiscal year 1998. A similar proportion was reflected in the baccalaureate/transfer and occupational program areas.
- The largest number (3,088) of male completers of a specific degree or certificate was in the associate in applied science degree program. However, the majority of AAS graduates (67 percent) were female.
- Although small in number (73), the Associate in Engineering Science program had the highest proportion of male graduates (86.1 percent).
- Minority students earned 24 percent of the collegiate-level degrees granted in the Illinois community college system during fiscal year 1998. Blacks achieved 12.9 percent, Hispanics earned 6.4 percent and Asians earned 4.2 percent of these degrees.
- Minorities comprised only 17 percent of the total graduates with baccalaureate/transfer degrees. Blacks accounted for 8.2 percent, 4.9 percent were Hispanic, and 2.9 percent were of Asian origin.
- A larger number of minority graduates was found in the occupational area (5,868) than in the baccalaureate/transfer area (2,221).
- More than twice as many black students completed collegiate-level programs than did Hispanic students.
- Fourteen percent of the students who were awarded degrees and certificates during fiscal year 1998 were less than 21 years of age. The age groups with the largest percentages of graduates were the 21 to 24 and the 31 to 39 year olds (30.9 and 18.6 percent, respectively).
- The proportion of occupational graduates increased as age advanced.
- Nearly 12 percent of the students who successfully completed baccalaureate/transfer degrees in fiscal year 1998 indicated an intent to prepare for a job immediately after community college or improve job skills, *not* to prepare for transfer to a four-year institution.
- Twenty percent of the fiscal year 1998 AAS degree graduates had indicated their goal was to complete one or more courses or a certificate, *not* to earn an associate degree. This demonstrates that students sometimes alter their goals as they progress through the community college system.

OVERALL FISCAL YEAR 1998 STUDENT ENROLLMENTS

The Illinois Community College System recorded a total of nearly one million (957,815) students during fiscal year 1998. This overall enrollment figure, which includes student enrollments in credit and noncredit courses, has increased 1.9 percent since fiscal year 1997. In fact, overall enrollments have increased each year since fiscal year 1994 when annual aggregate noncredit headcounts were first collected. Fiscal year 1998 totals are 7.4 percent higher than those reported five years earlier.

Table 1 provides a summary comparison of fiscal year 1994 through fiscal year 1998 credit and noncredit unduplicated enrollments. Total enrollments do not reflect those students who may be concurrently enrolled in credit-generating and noncredit courses during the fiscal year.

SOURCES OF DATA: Annual Enrollment (A1) Records,
Annual Noncredit Enrollment Surveys

Comparisons of fiscal year 1994 through fiscal year 1998 unduplicated credit and noncredit headcount enrollments for each community college are provided in Appendix tables A-1 and B-1, respectively.

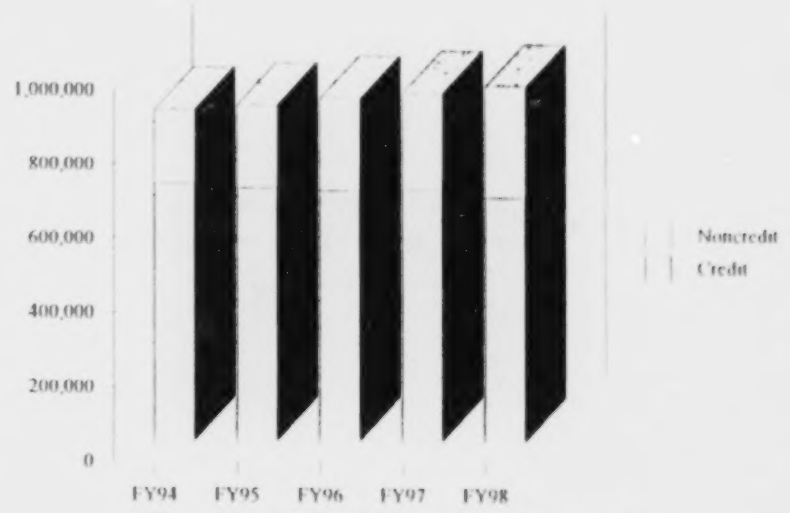

Fig. 1. Overall Annual Enrollments, FY 1994-1998

As depicted in Figure 1, credit generating students account for slightly more than two-thirds (68.8 percent) of the overall fiscal year 1998 headcount. An examination of the five year period indicates that the proportion of credit generating students has decreased nearly 9 percent since fiscal year 1994, when the proportion of credit generating students was more than three-fourths (77.6 percent) of the overall student population. The largest annual increase in the proportion of noncredit student participation is evident in the past year, increasing from 27.9 percent in fiscal year 1997 to 31.1 percent in fiscal year 1998.

FISCAL YEAR 1998 STUDENT CREDIT ENROLLMENTS

Student Credit Enrollment by Community College

Annual enrollment for fiscal year 1998 was 659,069, and FTE students totaled 217,310. Table 2 contains comparative enrollment data for the last five years. Fiscal year 1998 total headcount enrollment decreased 2.7 percent from the previous year, and fiscal year 1998 FTE enrollment decreased only 0.6 percent. Headcount enrollments have decreased 4.8 percent since 1994, while FTE enrollments decreased 4.9 percent. Headcount enrollments were at their highest at 727,310 in fiscal year 1992. Although FTE enrollments peaked at 237,762 the following year, very little change has occurred the past three years.

Table 2
COMPARISON OF ANNUAL CREDIT ENROLLMENTS
IN ILLINOIS PUBLIC COMMUNITY COLLEGES
FISCAL YEARS 1994-1998

	FY 94	FY 95	FY 96	FY 97	FY 98
Headcount	692,276	682,243	675,554	677,314	659,069
% Change	*-4.4%*	*-1.4%*	*-1.0%*	*0.3%*	*-2.7%*

% Change	*-3.9%*	*-4.1%*	*-0.9%*	*0.5%*	*-0.6%*

Source of Data: Annual Enrollment (A1) Records

Table A-1 in the appendix provides a comparison of fiscal year 1994 through fiscal year 1998 headcount enrollments for each community college. Of the 49 community colleges, 22 colleges experienced increases in headcount, while 23 exhibited decreases during the past year. Four colleges experienced little or no change (1.0 percent or less) over the last year. Table A-2 contains a comparison of FTE enrollments for the five-year period, indicating 24 colleges with increases, 16 with decreases, and 9 with little change.

Male/Female Distribution

The male/female distribution of students typically fluctuates little from year to year. Females comprised 56.1 percent of the student population in fiscal year 1998. The percentage of male students has averaged 44.4 percent over the past five years. (See Table A-3.)

Ethnic Origin

All changes in the proportion of ethnic groups during fiscal year 1998 were slight -- less than 1 percent in each category. Although minority representation increased slightly during fiscal years 1996 and 1997, the overall proportion of minority student enrollments decreased slightly in the past year (34.0 percent to 33.2 percent). During the past five years, minorities have comprised an average of about one-third (33.0 percent) of the student population. The fiscal year 1998 minority decrease is largely due to a decline in the proportion of the two largest minority groups, black and Hispanic, which each experienced a 0.5 percent decrease. In fact, fiscal year 1998 black representation is at its lowest (14.4 percent) in the past five years. Despite the recent decrease in the proportion of Hispanic students, the 1998 proportion (13.2 percent) remains above that of the five-year average (12.8 percent) and is only 1.2 percent less than that of the black student group (See Table A-4.)

Student Age

The average age of the Illinois community college student was 31.5 years in fiscal year 1998, the same as in fiscal year 1997. The median age was 27.4 years. The largest proportion of students (22.0 percent) was in the 17-20 year old category, a slight increase from the previous year. Once the third largest group (fiscal years 1994-1996), the next in size, 21-24 year old students (19.8 percent), also increased slightly. However, the next three groups by proportion, 40-55 (18.6 percent), 31-39 (17.6 percent), and 25-30 (16.6 percent), declined somewhat. The 31-39 year old group had previously (fiscal years 1994-1996) been the second largest age bracket. Always the smallest in size, the 16 and under age group represented only 0.5 percent of the student population in fiscal year 1998. (See Table A-5.)

Summary of Enrollments by Instructional Program Area

The baccalaureate/transfer program is the largest instructional program offered in the Illinois community college system. Statewide, this program area decreased 3.1 percent in the past year. An examination of these data reveals that a large increase in the total number of baccalaureate/transfer students was experienced in 1994, followed by two years of level enrollments culminating in a 17.7 percent decrease in the five-year period. Further study reveals that the large shift in enrollments was due to the inclusion of adult education (specifically English As a Second Language) students in the baccalaureate/transfer programs at City Colleges of Chicago five years ago. Consequently, adult education enrollments experienced a large decrease at the same time. Adult education enrollments lapsed once again in fiscal year 1998 by 12.6 percent. The second largest program, occupational, which showed a decrease of 1.0 percent from fiscal year 1997 to fiscal year 1998, decreased 7.6 percent over the five-year period. In the past year, enrollments also decreased in the vocational skills area (2.1 percent), while sizeable gains were experienced in the two smallest programs, general associate (22.5 percent) and general studies (13.2 percent). (See Table A-6a).

Analysis of instructional program area information, excluding City Colleges of Chicago data, produces less exaggerated trends for most of the program areas. Very little change was exhibited in the two largest programs, baccalaureate/transfer (-0.6 percent) and occupational (-0.3 percent). The general associate program increased moderately at 3.9 percent, while general studies programs increased substantially at 29.3 percent. The vocational skills program experienced the largest decline at 5.4 percent, and the adult education programs decreased 4.1 percent (see Table A-6b). A review of enrollment data from fiscal year 1994 to fiscal year 1998 reveals increases in all but one program area. General studies programs increased the most (18.6 percent), followed by increases in vocational skills (4.9 percent), adult education (4.6 percent), general associate (4.4 percent), and baccalaureate/transfer (2.7 percent). A decrease (7.3 percent) occurred in the occupational program area. While occupational enrollments have decreased, the number of students enrolled in noncredit courses, many of which are suitable for updating professional skills in business and industry, increased. A review of noncredit course enrollments is provided in the next section of this report.

Instructional Program Enrollments by Gender. During fiscal year 1998, females outnumbered males in all instructional areas; the English as a Second Language program contained the highest proportion of male students (47.8 percent). The highest proportion of females (58.8 percent) was enrolled in the general studies certificate program followed closely by the baccaluareate/transfer program (58.4 percent). (See Table A-7.)

Instructional Program Enrollments by Racial/Ethnic Origin. Figure 2 illustrates the distribution of minorities in the two largest program areas, baccalaureate/transfer and occupational/career. An examination of each racial/ethnic group's representation across program area in fiscal year 1998 indicates that the largest percentage of white (41.2 percent), Asian (32.6 percent), American Indian (31.7 percent), and black (29.3 percent) students were enrolled in baccalaureate/transfer programs. The highest percentage of Hispanic (43.3 percent) students were enrolled in English as a Second Language programs. Overall, minority students were represented the least in the vocational skills (17.5 percent), baccalaureate/transfer (22.1 percent), and occupational (23.2 percent) areas (see Table A-8).

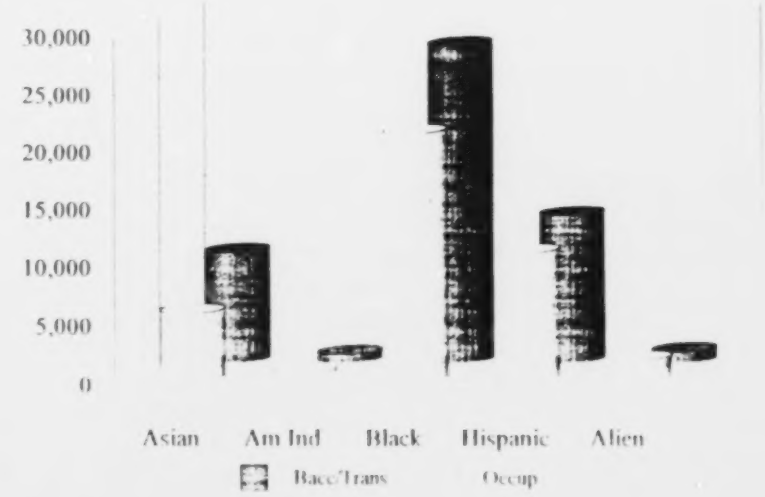

Fig. 2. Fiscal Year 1998 Minority Enrollments in Baccalaureate Transfer and Occupational Programs

Instructional Program Enrollments by Age. During fiscal year 1998, 41 percent of community college students were under 25 years of age. Half (49.5 percent) of the students in this age group were enrolled in baccalaureate/transfer programs. The 25-39 year old age group comprised 33.2 percent of the total student population; 31.2 percent were enrolled in the occupational program area, while another 28.2 percent was enrolled in the baccalaureate/transfer program. More than one-fifth of Illinois' community college students were at least 40 years old. Nearly one-third of these "older" (40+) students were enrolled in occupational programs, while another 22 percent were enrolled in baccalaureate/transfer programs. (See Table A-9.)

Largest Occupational Programs. An examination of those occupational curricula with at least 5,000 students enrolled during either of the last two years revealed, as in the past several years, that the associate degree nursing program (ADN) was the largest program. However, enrollment in this program decreased 5 percent (or 557 students) since the previous year. Business Data Programming placed a close second to ADN with a substantial increase of 16.8 percent (1,491 students). Enrollment in Business Administration & Management varied little (+0.3 percent), while the remaining programs in the group experienced moderate to slight decreases: Accounting and Bookkeeping (-4.2 percent), Child Care Provider/Assistant (-2.0 percent), and Criminal Justice Technology (-0.5 percent).

Instructional Program Enrollments by Intent. Intent data convey the primary goal that the student wants to achieve as a result of his/her studies. The intent data are self-reported by students when they initially enroll at the college. College staff are asked to require students to update this information periodically by providing a current intent as well as entry intent. An examination of the intent data across program areas illustrates the diversity of interests and needs that community college students possess. Two goals combined to represent the aspirations of more than 40 percent of community college students: 26.9 percent were preparing for transfer to a four-year institution and 16.5 percent were preparing for a job immediately after community college.

Examination of student intent by program area reveals interesting observations. With the exception of adult education and baccalaureate/transfer, less than half of the students in any program area were pursuing the particular goal most often associated with a given major. Only 56.4 percent of those students enrolled in baccalaureate/transfer programs indicated that they intend to transfer to a four-year institution. Less than two-thirds of those students in occupational programs had enrolled with an intent of preparing for a job after community college or to improve their present job skills. Sixty percent of ABE/ASE and 75.3 percent of ESL students listed a desire to remedy basic skills deficiencies or to prepare for the GED test as their reason for attending. (See Table A-11.)

Instructional Program Enrollments by Degree Objective. Degree objective data are also self-reported and are designed to assist colleges in classifying students by curriculum or course enrollee category. The objective conveys the student's expected outcome from attending the community college. In fiscal year 1998, 61.7 percent of the students indicated that they were enrolled with no intention of pursuing a degree -- only to complete a certificate or one or several courses. A review of student objectives by program area reveals expected results: 58 percent of the baccalaureate/transfer students plan to complete an associate degree, while 38 percent are interested in completing one or several courses. Less than half (44.2 percent) of the occupational/career students indicated that they expected to complete an associate degree, while 38.4 percent listed that they expected only to complete one or several courses. Seventeen percent wanted to complete a certificate. These data illustrate the diversified needs of occupational students in the community college system. Many students complete an entire program, while others simply want to improve their current skills or obtain skills to enter a different career. Employers often do not require that a student earn a formal certificate or degree; only that they acquire the skills necessary to perform specific job duties. As expected, in the ESL, vocational, general studies, and ABE/ASE programs, the vast majority

(89.0, 86.6, 82.9, and 77.0 percent, respectively) of students planned only to complete one or several courses. (See Table A-12.)

Enrollment Hours by Term and Type of Attendance

Ninety-one percent of the students attending the summer term of fiscal year 1998 were part-time (less than nine credit hours). Seventy-three percent of the students were attending college on a part-time (less than 12 credit hours) basis during the fall semester. The part-time proportion was slightly higher (75.0 percent) the following spring. In a pattern typical to higher education, more students attended Illinois community colleges in the fall semester (378,044) than in the spring semester (375,450). (See Table A-13.) Nearly 202,080 students attended both the fall and spring semesters.

Highest Degree Earned by Students Prior to Attending Community College

The educational background of community college students is diverse. Of the 78 percent of students who reported their previous degrees earned (excluding adult education students who would typically not possess earned degrees), 15 percent had earned a postsecondary certificate or degree. Nearly 13 percent had already earned degrees at or beyond the community college level. (See Table A-14.) Figure 3 illustrates the educational background of these fiscal year 1998 students.

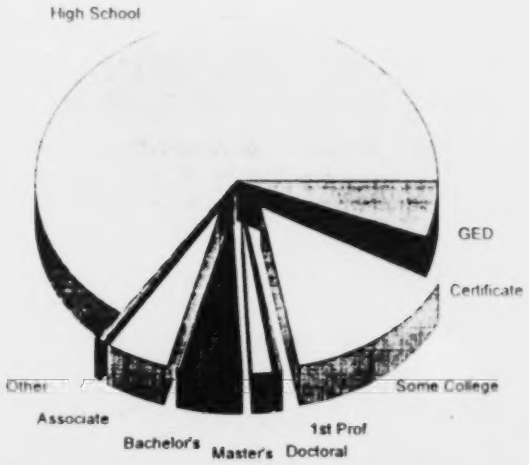

Fig. 3. Fiscal Year 1998 Headcount Enrollment by Prior Highest Degree Earned

Attempted vs. Earned Credit Hours

At all colleges and universities, there are students who, for a variety of reasons, are unable or unwilling to complete the requirements for the class in which they are enrolled. In 1998, Illinois community college students completed 4,832,324 credit hours, or 74.1 percent of their attempted hours. Overall, full-time students earned a higher percent of attempted hours than did part-time students. (See Table A-15).

Of the 470,506 students (71.4 percent) for whom data were available, more than two-thirds had accumulated less than 30 college-level hours (freshman level). Eighteen percent had accumulated between 30 to 59 credit hours (sophomore status), and 13 percent earned 60 or more credits. (See Table A-16.)

Grade Point Averages

Cumulative grade-point average data were available for 64.5 percent of the fiscal year 1998 enrollments. Eighty-two percent of the students had a grade point of 2.01 or above (minimum of a C average). Thirty-seven percent had achieved a grade point between 2.01 and 3.00 (C to B), while 45 percent were in the 3.01 to 4.00 (B to A) range. (See Table A-17.)

High School Graduation Percentile Rank

High school class rank was reported for 16 percent of the fiscal year 1998 community college students. Of this population, 5 percent were in the top tenth percentile of their graduating class, while 48 percent graduated in the top half of their class. (See Table A-18.)

ACT Scores of Community College Students

ACT score data were available for 11 percent of the students. Fifty-seven percent of the students received a 19 or higher on the ACT exam. A minimum of 18 on the ACT exam is normally required for acceptance into many colleges or universities. For those fiscal year 1998 students from whom data were gathered, the average ACT score was 18.4. The median score was 19. (See Table A-19.)

FISCAL YEAR 1998 STUDENT NONCREDIT COURSE ENROLLMENTS

Student Noncredit Enrollment by Community College

Illinois community colleges provide a wide array of noncredit instruction to meet a multitude of community needs. Table 3 contains comparative noncredit enrollment data for the last five years. Fiscal year 1994 was the first year in which annual noncredit course enrollment data were collected.

Table 3

SOURCE OF DATA: Annual Noncredit Enrollment Surveys

During fiscal year 1998, 33,538 various noncredit course sections were conducted throughout the state, nearly 11 percent more than the previous year. Course offerings have, in fact, increased each year in the five-year period. From fiscal year 1994 to fiscal year 1998, the total number of course sections offered through the colleges increased 54.2 percent.

As illustrated in Figure 4, student enrollments have also increased dramatically. In the past year, the unduplicated noncredit headcount (in which students are counted only once, regardless of the number of noncredit courses in which they enroll) increased 13.9 percent. Since annual noncredit data collection began five years ago, unduplicated noncredit headcounts have increased 49.9 percent. The fiscal year 1998 duplicated headcount (also known as "seatcount") was 11.1 percent higher than the previous year and 66.3 percent higher than five years earlier.

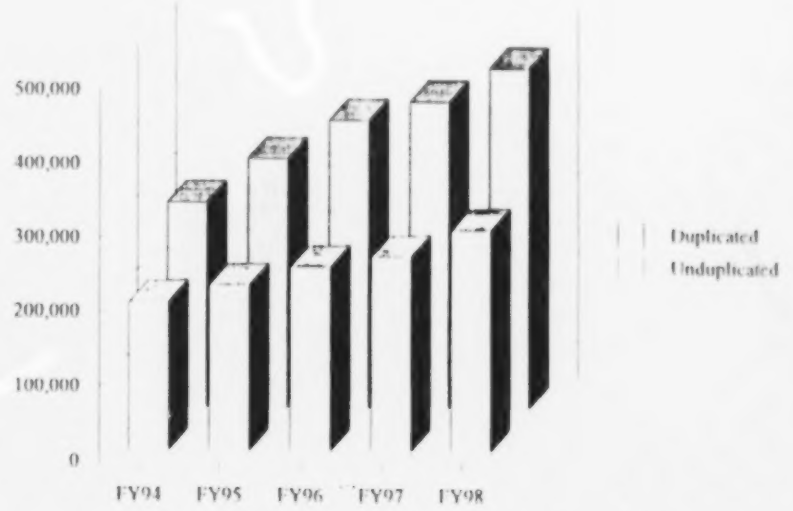

Fig. 4 Noncredit Course Enrollments, FY 1994-1998

The number of noncredit course offerings and enrollments at the community colleges often vary from year to year, depending on the needs of the surrounding communities. Comparisons of fiscal year 1994 through fiscal year 1998 noncredit headcount enrollments and course sections conducted for each community college are provided in Appendix Tables B-1, B-2, and B-3.

FISCAL YEAR 1998 COMPLETIONS

Degrees and Certificates Awarded by Community College

The number of collegiate level degrees and certificates awarded to Illinois community college students in fiscal year 1998 totaled 34,529. Table 4 contains comparative completion data for the last five years. The number of degrees and certificates awarded increased by 3.4 percent over fiscal year 1997. Compared to fiscal year 1994, the total number of fiscal year 1998 completions was relatively unchanged (+0.1 percent).

% Change	*-5.6%*	*1.4%*	*-3.1%*	*-1.4%*	*3.4%*

SOURCE OF DATA: Annual Enrollment and Completion (AE) Records

Table C-1 in the appendix provides a comparison of fiscal year 1994 through fiscal year 1998 duplicated completions for each community college. Of the 49 colleges, 24 experienced increases in degree and certificate awards, while 22 exhibited decreases in the past year. Three colleges experienced little or no change.

Degrees and Certificates Awarded by Program Categories

Of the 34,529 completions during fiscal year 1998, nearly 60 percent were occupational degrees or certificates. Baccalaureate/transfer degrees accounted for 38.7 percent of all the collegiate level completions. Among these baccalaureate/transfer degrees, the associate in arts degree was most commonly awarded (59.7 percent). More than one-third (35.2 percent) of the baccalaureate/transfer degrees bestowed were associate in science degrees. The proportion of AA and AS degrees granted has changed very little in the past five years. The total number of transfer degrees awarded increased 2 percent since fiscal year 1997. Overall, 483 more baccalaureate/transfer degrees were awarded in fiscal 1998 than were awarded five years earlier (an increase of 3.8 percent).

An examination of the occupational degrees and certificates awarded in fiscal year 1998 indicates that 45.4 percent (9,260) were associate in applied science degrees. Thirty-one percent of the completions were for certificates of less than one year. After a slight increase in 1995, the total number of occupational completions decreased for two years. However, occupational completions increased 4.2 percent from fiscal year 1997 to fiscal year 1998. This increase was due primarily to a larger number of certificates awarded during the year. Although small in volume, the number of vocational skills certificates awarded in fiscal year 1998 more than tripled over the previous year. Long term occupational certificates (one year or more) increased 6.7 percent, while short term certificates (less than one year) increased 4.7 percent in the past year. Associate in applied science degrees increased only slightly (0.8 percent). A comparison of fiscal year 1998 occupational completions to those awarded five years earlier reveals that the total number of awards decreased by 2.6 percent. A closer examination shows that, although the number of associate degrees and short term certificates decreased (6.1 percent and 5.2 percent, respectively), the number of long-term certificates increased by nearly 6 percent.

Summary of Graduates by Degree Categories

Gender of Graduates by Degree Category. During fiscal year 1998, six out of ten degrees and certificates were earned by females. The specific degree attained by the highest proportion of females was the associate in applied science degree (67 percent). Although small in number (73), associate in engineering science — one of the newest degree programs in the Illinois community college system — had the highest proportion of male graduates (86.1 percent). The associate in applied science was the specific degree program with the largest number of male graduates (3,088). The male/female distribution within the baccalaureate/transfer degree and occupational degree and certificate areas reflects the overall proportion. (See Table C-3.)

Racial/Ethnic Origin of Graduates by Degree Category. Approximately 24 percent of all degrees and certificates in fiscal year 1998 were awarded to minority (non-white) students. Seventeen percent of all fiscal year 1998 baccalaureate/transfer degrees were earned by minority students, the majority of which were associate in arts designations (71.5 percent),while 26.4 percent were associate in science degrees. This is the same as the previous year's overall proportion of minority baccalaureate/transfer completers. A larger number of minority graduates was found in the occupational area (5,868) than in the baccalaureate/transfer area (2,221). More than twice as many black students completed collegiate-level programs than did Hispanic students in fiscal year 1998. (See Table C-4). Figure 5 illustrates the distribution of minority students who successfully completed degree programs in the Illinois community college system during fiscal year 1998.

Age of Graduates by Degree Category. Fourteen percent of the completers were in the under 21 year old age group. These graduates were predominately (64.8 percent) in baccalaureate/transfer programs. The 21-24 age group accounted for 31 percent of the total graduates, while the 25-30 and 31-39 age groups each accounted for nearly 19 percent. Half of the students 30 and under completed baccalaureate/transfer degrees, while only one-fifth (19.0 percent) of the graduates

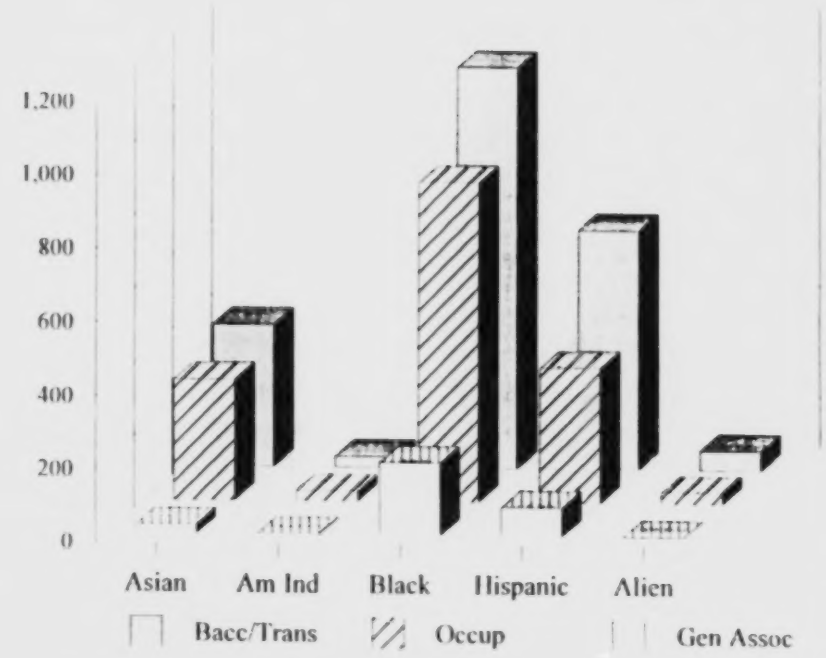

Fig. 5. FY 1998 Associate Degrees Earned by Minority Students

over the age of 30 completed baccalaureate/transfer programs. More than three-fourths (77.8 percent) of those graduates age 30 or more earned occupational degrees and certificates. Across all age groups, the proportion of occupational graduates increased as age advanced. (See Table C-5.)

Intent of Graduates by Degree Category. These self reported data convey the primary goal that the student wants to achieve as a result of his/her studies. The community colleges examine current intent versus student intent at the time of initial enrollment at the college. In these analyses, current intent (when available) was analyzed to reflect the changing needs and desires of the community college student. Less than three-fourths (72.1 percent) of those students who attained a baccalaureate/transfer degree indicated that they wished to prepare for

transfer to a four-year institution. Nearly 12 percent of these successful students indicated a desire to prepare for a job immediately after community college or to improve present job skills — intents that would most often be associated with seeking an occupational degree or certificate. Likewise, only 62 percent of those students who attained an occupational degree or certificate indicated that they were preparing for a job immediately after completing community college or improving present job skills. Seventeen percent of these occupational graduates indicated that they sought preparation for transfer to a four-year institution. However, pursuing an occupational degree does not preclude a student from transferring. In fact, more than half of these occupational completers who indicated a desire to transfer were Health Professions and Related Sciences and Business Management and Administrative Services graduates. (See Table C-6.)

Degree Objective of Graduates by Degree Category. The self-reported degree objective conveys the student's expected outcome from attending the community college, and one would expect them to mirror the completion patterns of those students. Eighty percent of those students who earned baccalaureate/transfer degrees in fiscal year 1998 indicated that they enrolled with a desire to complete an associate degree. However, more than 16 percent indicated that they wanted to complete only one or several courses and were not pursuing a degree. A review of occupational graduates reveals the same pattern; 79 percent of the occupational students who earned an associate in applied science degree had listed completing an associate degree as their objective, but 22 percent of the students who had planned to only complete one or several courses or a certificate surpassed their goal by earning an associate degree. (See Table C-7.)

SUMMARY

As indicated by the demographic data presented in this report, the Illinois community college system enrolls a diverse group of students. Slightly more than half are female, one-third is of minority ethnicity, and two out of every five students are 31 years of age or older.

In the past year, based on fiscal year 1998 annual data, overall community college enrollments and completions increased. Despite a decline in the number of credit-generating students, the accelerating number of students served through noncredit courses affirms that the Illinois community college system continues to adapt to the educational needs of its communities, thus providing for a competent workforce readied for the challenges of a new millennium.

The Illinois community college system prepares analyses on an extensive array of information pertaining to students' educational experiences. In addition to enrollment and completion data, information is collected on student migration between community colleges and universities (shared data), follow-up of occupational program graduates and coursetakers, program review, minority student studies, and persistence and transfer rate studies. Initiatives to provide educational guarantees, promote leadership and core values, and establish performance-based funding demonstrate the underlying integrity with which the system operates. These studies and initiatives, along with a comprehensive state strategic plan which promotes student access and opportunity and encourages partnerships in education, government, and business, enable the Illinois community college system to carry out its mission to provide high quality, accessible, cost effective educational opportunities for individuals and communities across the state.
